

PlantUML

AN OPEN SOURCE PROJECT FOCUSED ON UML DIAGRAM DEVELOPMENT

ANDRÉS GARCÍA CELÍS - UO264345

EDUARDO LAMAS SUÁREZ - UO257611

FERNANDO SÁENZ DE SANTA MARÍA MODROÑO - UO266754

SARA VECINO GARCÍA - UO264093

What is it?

PlantUML is an open-source standalone tool that allows users to create UML diagrams from a plain text file. “Drawing” a diagram with Plant is similar to coding each object and its relation with the other objects. It defines a DSL which has the sole purpose of being human readable.

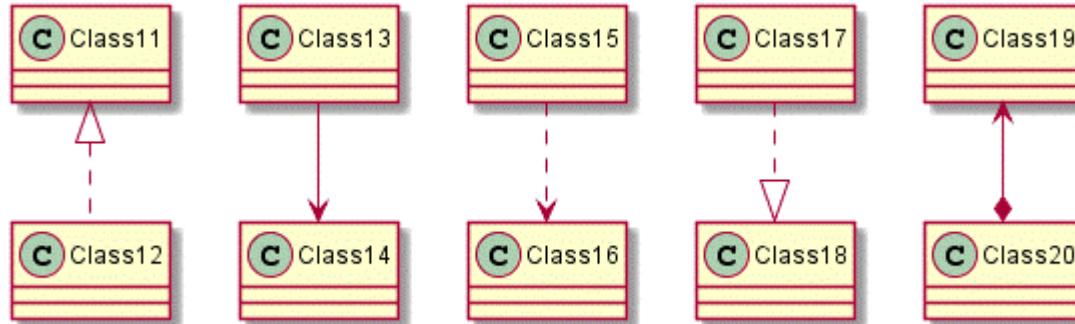

A large number of applications offer complete or partial integration, such as:

- GitHub
- Eclipse
- Google Docs
- Microsoft Word
- LaTeX
- IntelliJ IDEA
- Atom
- Visual Studio Code

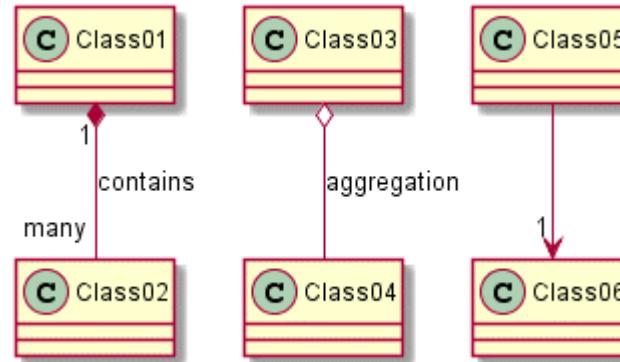

A simple overview

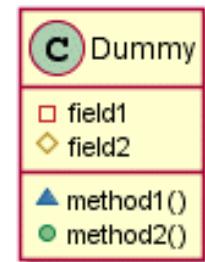

```
@startuml  
Class11 <|.. Class12  
Class13 --> Class14  
Class15 ..> Class16  
Class17 ..|> Class18  
Class19 <--* Class20  
@enduml
```

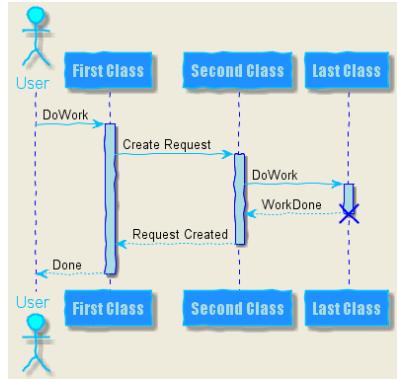

```
@startuml  
Class01 "1" *-- "many" Class02 : contains  
Class03 o-- Class04 : aggregation  
Class05 --> "1" Class06  
@enduml
```

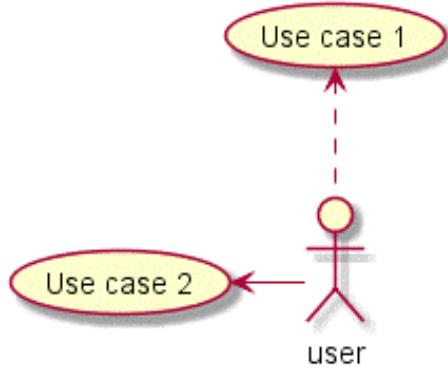

```
@startuml  
class Dummy {  
-field1  
#field2  
~method1()  
+method2()  
}  
@enduml
```

State diagram

Stakeholders

- Project designers/Software architects
- Software developers
- Blind software developers
- Software students
- Open-source community
- Implementations, extensions and add-ons

Constraints

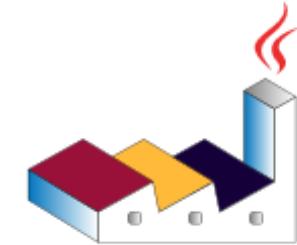

- Java programming language
- Easily modifiable diagrams
- Graphviz
- Open source project
- Continuous integration
- Pay special attention to the implementation design
- Maintain PlantUML language specification without changes

Quality attributes/goals

- Generating diagrams from simple and human-readable text
- Implement the tool maintaining the PlantUML DSL syntax stable
- Keep the source code for the tool open, under GPL v3.0
- Offer plenty of diagram options to generate

Development aspects

PlantUML is implemented in Java by Arnaud Roques, open-source and continuously integrated.

- Dependent on Graphviz and Java.
- Some of the design patterns used:
 - Command
 - Abstract Factory
 - Template Method
 - Strategy
- Very maintainable and reusable code.

Modules of the project

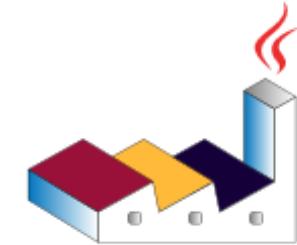

PlantUML
