## Lab 1

- Intro to labs
- Teams organization
- Git
- GitHub

# ● Intro to labs

What are we going to do in these sessions?

Develop an online shopping system **Decentralized Delivery** (DeDe) which respects privacy following SOLID principles

## Resources?

- <http://arquisoft.gihub.io>: course documents.
- [Virtual Campus](#)
- Lab spec:  
<https://arquisoft.github.io/course2122/labAssignmentDescription.html>
- Project github [repositories](#) .

## Lab assessment?

70% - Teamwork 

30% - Individual work 

# ● Team work

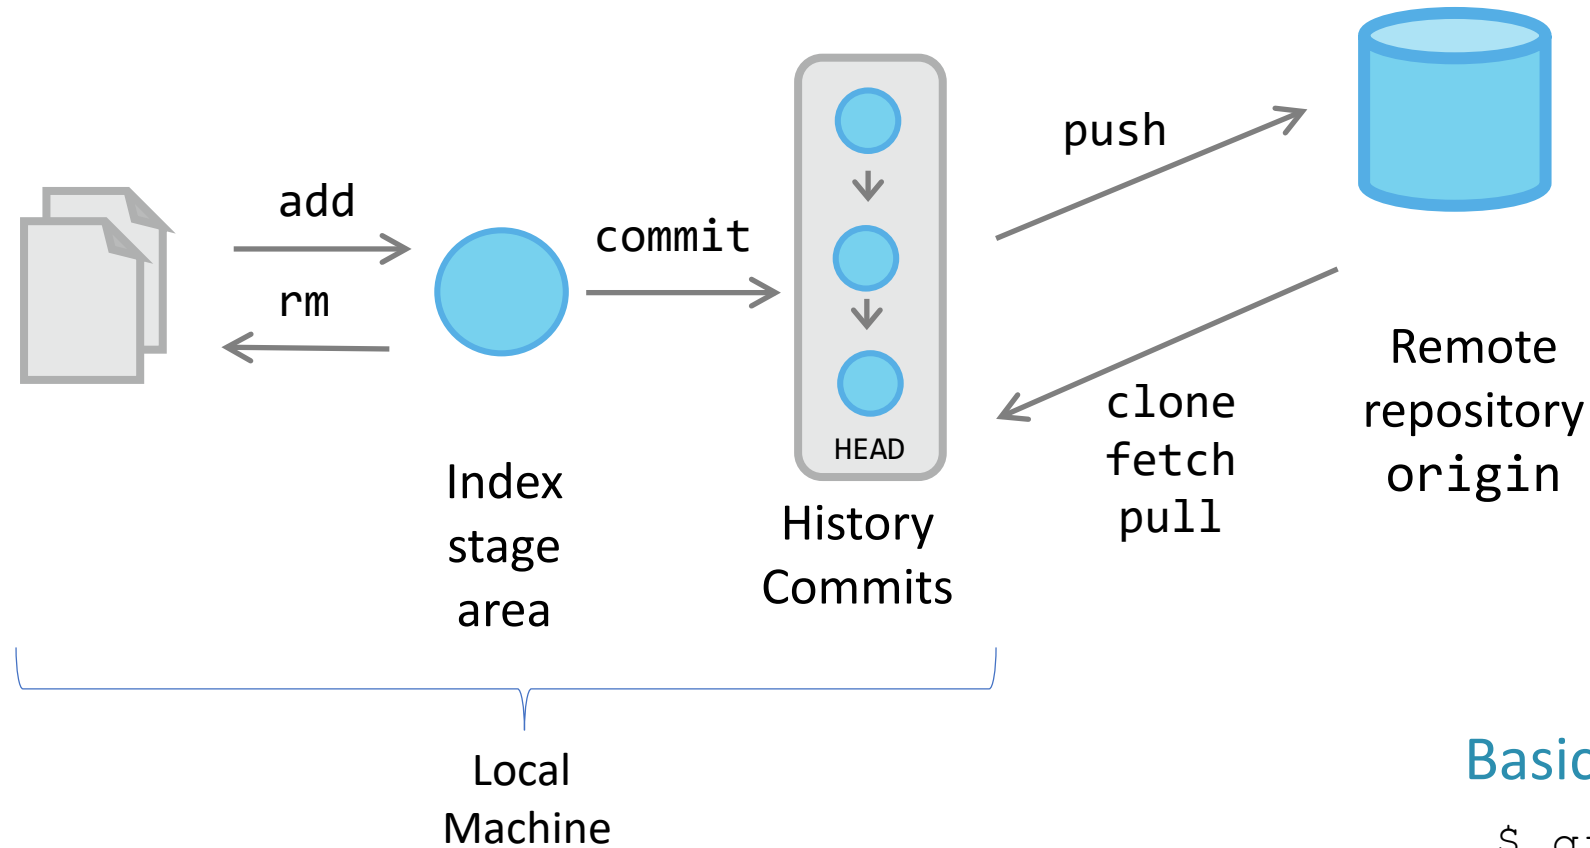

## Meeting minutes

- Each lab session == group meeting.
  - Other meetings allowed out of lab sessions
- **Mandatory** to take minutes of each meeting
- Wiki section of each repository will be used to record minutes
- Minimal mandatory format :
  - ☐ Date 📅
  - ☐ Participant list 👤
  - ☐ Agreements about work assignment for next session (open issues) ❓
  - ☐ Review state of tasks from past meetings ✓
    - Links to **Issues** and **Pull requests** 🔗
  - ☐ Short description of decisions taken
    - Preferable to include links architecture decision records (<https://adr.github.io/>)

● Git

# ● Git

## Basic workflow

```
$ git init
$ git clone urlRepository
$ git add .
$ git commit -m "message"
$ git push origin master
```

# Git Working with branches

Create a branch:

```
$ git checkout -b branch1
```

Check our current branch:

```
$ git branch
```

Change to another branch:

```
$ git checkout master
```

See differences from branches

```
$ git diff --stat master branch1
```

Merge branch:

```
$ git checkout master
```

```
$ git merge --no-ff branch1
```

Remove branch:

```
$ git branch -d branch1
```

Create the develop branch:

```
$ git checkout -b develop
```

Push it to the remote repository:

```
$ git push origin develop
```

# ● Git

## Branching strategies

- Several strategies whose success depends on several factors.
  - See: <https://martinfowler.com/articles/branching-patterns.html>
- Some popular patterns:
  - Git-flow, by Vincent Driessen, 2010: [A successful Git branching model](#)
  - [GitHub Flow](#) strategy
  - Trunk based development: <https://trunkbaseddevelopment.com/>

# Pull Request

## Steps

### New branch

```
$ git flow feature start RE1 develop #option 1
```

```
$ git checkout -b feature-RE1 develop #option 2
```

Add your name inside the *Collaborator* section in your *README.md* file

### Send your local changes

```
$ git add .
```

```
$ git commit
```

### Submit your changes to remote

```
$ git push --set-upstream origin feature-RE1
```

Go to github and **ask for a pull request**

# Changes

Use uuid v4 instead a manual generated id with Math.random to avoid problems when using the id in some places.

# Fixed issues

Fixed #30 on generating new users

Attach files by dragging & dropping, selecting or pasting them.

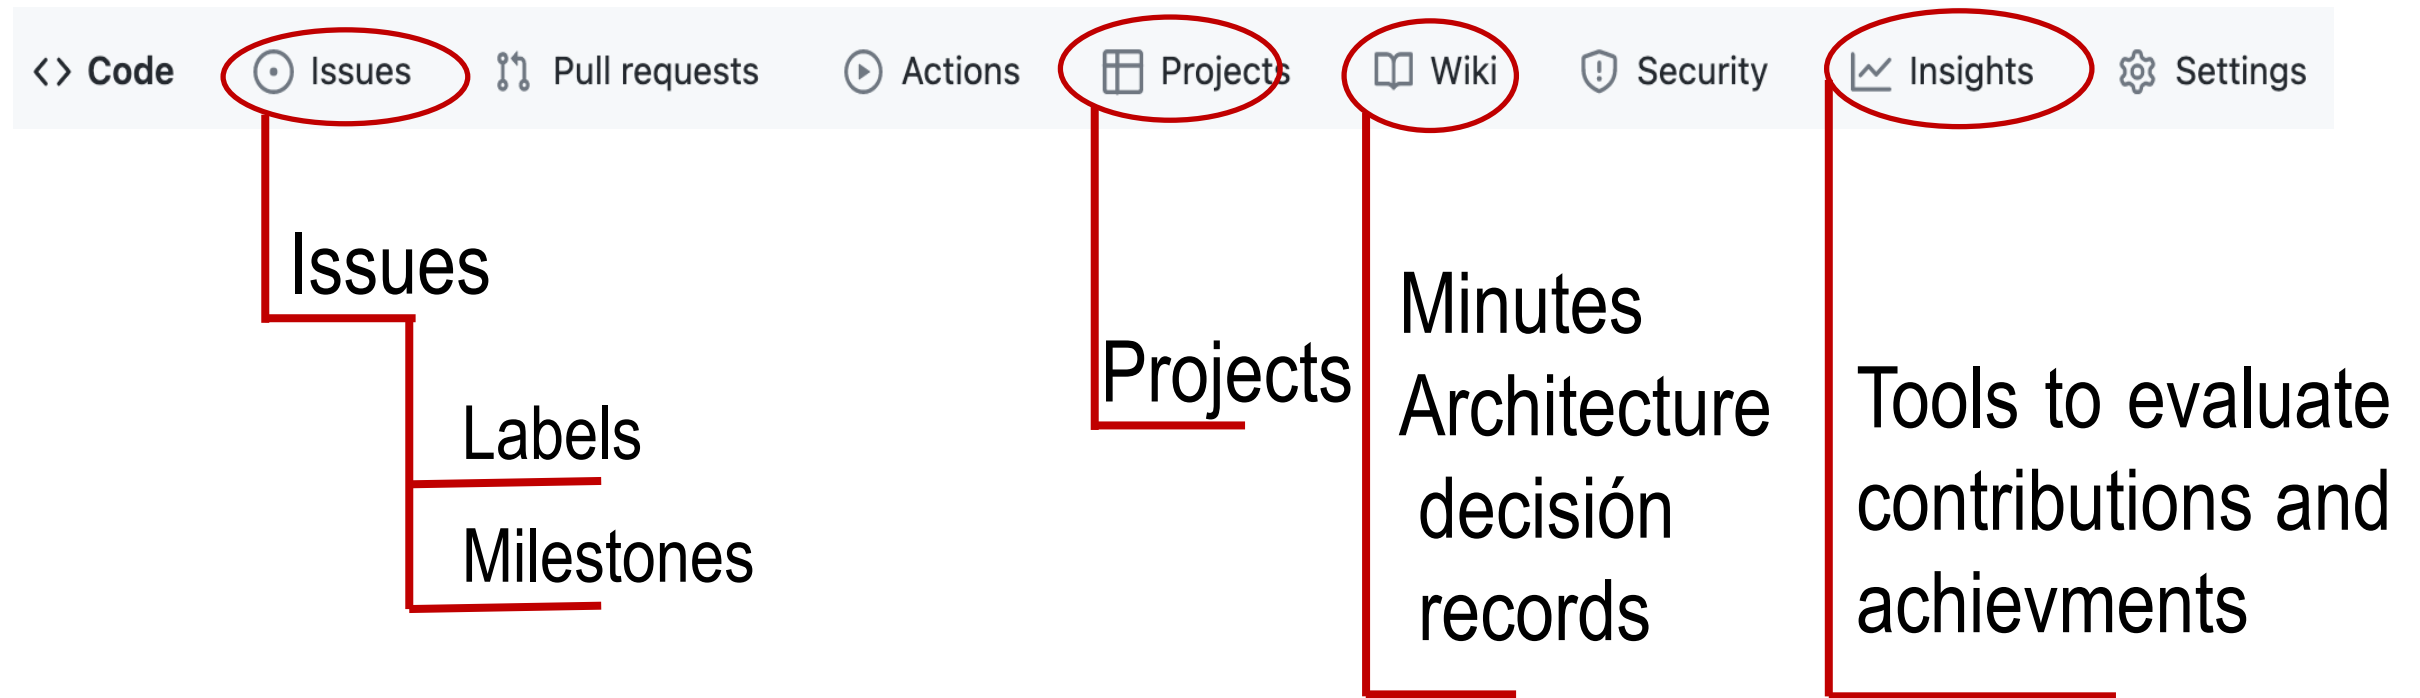

# ● GitHub as a Project management tool

## Advantages of Project management

- Project planning (future)
- More control over current project's state (present)
  - Detect bottlenecks.
  - Share work load between team members.
  - Current problems.
- Report achievements (Past).
  - Evaluate each member's contributions to the project

# Issues

They are like post-it in a **Kanban** project

☞ Each problem, task or even question related with the Project can have a issue.

They use **Markdown**.

Recommended to write only the necessary to understand the issue. You can add pictures or links

**It is the main part of a Project** and can be used to understand the state of the project.

An Issue can be related with other entities in a github repo.

Problem explanation

Comments

RubenVerborgh commented  
on 9 Dec 2021

Member

In some previous testing, I have come across preliminary evidence that some Solid-related functionality only works over HTTPS. In particular, when running Mashlib as the on-server UI, authentication seems to break because the server is not running over HTTPS.

Whereas this is actually a question for the bigger Solid ecosystem, we can test some assumptions on CSS and turn them into recommendations.

If the answer is that some functionality only works over HTTPS, then we might want to make CSS start over HTTPS out of the box (e.g., by auto-generating `localhost` certificates etc.).
